A person is shown from the chest up, sitting at a desk and working on a computer. The image is partially obscured by a large green overlay on the right side, which contains the text 'Capital Budget'. The background is a blurred office setting. The entire graphic is framed by a white border with a thin green line, and two dark brown horizontal bars are positioned on the left and right sides of the frame.

Capital Budget

3. Internal Rate of Return

Definition:

The discount rate that equates the present value of the project's free cash flows (inflow) with the project's initial cash outlay.

Accept/Reject criteria

$IRR >$ firm's required rate of return or cost of capital: **accept**

$IRR <$ firm's required rate of return or cost of capital: **reject**

What is the IRR Formula?

The IRR formula is as follows:

$$0 = CF_0 - \frac{CF_1}{(1 + IRR)} + \frac{CF_2}{(1 + IRR)^2} + \frac{CF_3}{(1 + IRR)^3} + \dots + \frac{CF_n}{(1 + IRR)^n}$$

Firm accepted or required
rate of return.
Firm desired rate

Where:

CF_0 = Initial Investment / Outlay

$CF_1, CF_2, CF_3 \dots CF_n$ = Cash flows

n = Each Period

N = Holding Period

NPV = Net Present Value

IRR = Internal Rate of Return

Lakshmi company has a project to invest Rs 1000 which earn to Rs. 1300 in four years with cash flow of 500 in 1st year and 400 in 2nd year 300 in 3rd and 100 in 4th year. If cost of capital is 15%.

we should accept this project or not??

Internal Rate of Return (IRR)

$$0 = \frac{500}{(1 + IRR)^1} + \frac{400}{(1 + IRR)^2} + \frac{300}{(1 + IRR)^3} + \frac{100}{(1 + IRR)^4} - 1000$$

How to find terminated value

What is the IRR Formula?

The IRR formula is as follows:

$$0 = CF_0 + \frac{CF_1}{(1 + IRR)} + \frac{CF_2}{(1 + IRR)^2} + \frac{CF_3}{(1 + IRR)^3} + \dots + \frac{CF_n}{(1 + IRR)^n}$$

(higher rate – lower rate) (highest amount – initial investment)

IRR= lowest rate of return +

(Higher amount- lower amount)

IRR calculation with example

IIR Inspectors company have a project to invest RS.80000 with proposal to cost of capital is 12%. Further his future free cash flows are 15000 in 1st year, then 20000 in 2nd 25000 in 3rd yeard, 30000 and 35000 in 4th and 5th respectively.

Should guys you want to invest in this project???

With your strong suggestion with the help of IRR concept with analysis

So our formula to find a % (terminated value) which equate our invest ZERO as we early understand.

$$\text{IRR} = \text{lowest rate of return} + \frac{(\text{Higher rate IRR} - \text{lower rate IRR}) (\text{highest amount} - \text{initial investment})}{(\text{Higher amount} - \text{lower amount})}$$

According to formula IRR first we need to find two rates of return or IRR for formula

Highest rate ?

Lowest rate?

Highest Amount **positive NPV?**

Lowest Amount **Negative NPV ?**

| Solution | |
|---------------------------|-------------------|
| years | cash flows |
| 0 | -80000 |
| 1 | 15000 |
| 2 | 20000 |
| 3 | 25000 |
| 4 | 30000 |
| 5 | 35000 |
| total cash inflows | 125000 |

We need to find PV with a rate with equated 125000 to 80000.

IIR Inspectors company have a project to invest RS.80000 with proposal to cost of capital is 12%.

| years | cash flows | PV formula |
|-------|------------|----------------|
| 0 | -80000 | |
| 1 | 15000 | $FV/(1+IIR)^1$ |
| 2 | 20000 | $FV/(1+IIR)^2$ |
| 3 | 25000 | $FV/(1+IIR)^3$ |
| 4 | 30000 | $FV/(1+IIR)^4$ |
| 5 | 35000 | $FV/(1+IIR)^5$ |

Solution

Lets start with 15%

| years | cash flows | PV formula | IRR 15% |
|---------------------------|---------------|----------------|-------------------------------------|
| 0 | -80000 | | |
| 1 | 15000 | $FV/(1+IRR)^1$ | Rs13,043 |
| 2 | 20000 | $FV/(1+IRR)^2$ | Rs15,123 |
| 3 | 25000 | $FV/(1+IRR)^3$ | Rs16,438 |
| 4 | 30000 | $FV/(1+IRR)^4$ | Rs17,153 |
| 5 | 35000 | $FV/(1+IRR)^5$ | Rs17,401 |
| total cash inflows | 125000 | | Rs79,158 |
| | | | Near and just below to 80000 |

Lowest Amount **Negative NPV** ?

| Solution | | | Lets start with 15% | Lets start with 13% |
|---------------------------|---------------|----------------|------------------------------|--------------------------|
| years | cash flows | PV formula | IRR 15% | IIR 13% |
| 0 | -80000 | | | |
| 1 | 15000 | $FV/(1+IIR)^1$ | Rs13,043 | Rs13,274 |
| 2 | 20000 | $FV/(1+IIR)^2$ | Rs15,123 | Rs15,663 |
| 3 | 25000 | $FV/(1+IIR)^3$ | Rs16,438 | Rs17,326 |
| 4 | 30000 | $FV/(1+IIR)^4$ | Rs17,153 | Rs18,400 |
| 5 | 35000 | $FV/(1+IIR)^5$ | Rs17,401 | Rs18,997 |
| total cash inflows | 125000 | | Rs79,158 | Rs83,660 |
| | | | Near and just below to 80000 | it is so high from 80000 |

Highest Amount **positive NPV?**

| Solution | | | Lets start with 15% | Lets start with 13% | Lets start with 14% |
|---------------------------|---------------|----------------|------------------------------|--------------------------|------------------------------|
| years | cash flows | PV formula | IRR 15% | IIR 13% | NPV 14% |
| 0 | -80000 | | | | |
| 1 | 15000 | $FV/(1+IIR)^1$ | Rs13,043 | Rs13,274 | Rs13,158 |
| 2 | 20000 | $FV/(1+IIR)^2$ | Rs15,123 | Rs15,663 | Rs15,389 |
| 3 | 25000 | $FV/(1+IIR)^3$ | Rs16,438 | Rs17,326 | Rs16,874 |
| 4 | 30000 | $FV/(1+IIR)^4$ | Rs17,153 | Rs18,400 | Rs17,762 |
| 5 | 35000 | $FV/(1+IIR)^5$ | Rs17,401 | Rs18,997 | Rs18,178 |
| total cash inflows | 125000 | | Rs79,158 | Rs83,660 | Rs81,362 |
| | | | Near and just below to 80000 | it is so high from 80000 | Near and just above to 80000 |

$$\text{IRR} = \text{lowest rate of return} + \frac{(\text{higher rate} - \text{lower rate}) (\text{highest amount} - \text{initial investment})}{(\text{Higher amount} - \text{lower amount})}$$

$$\text{IRR} = 14 + \frac{(15\% - 14\%)(81361 - 80000)}{(81361 - 79159)}$$

$$14 + \frac{(1)(1361)}{(2202)} = 14.61\%$$

14.61%

So this is the rate of Actual IRR

Where

$$0 = 80000 - 80000$$

Now project is accepted or rejected???

IRR Inspectors company have a project to invest RS.80000 with proposal to cost of capital is 12%.
